PROFESSIONAL SUMMARY

Innovative Lead Software Engineer with expertise in full-stack development, systems engineering, and application architecture. Proven track record of designing high-performance solutions using Rust, C++, C#, and modern web frameworks. Experienced in modernizing legacy systems, managing database architecture, and developing open-source tools. adept at solving complex technical challenges across Windows and Linux environments.

TECHNICAL SKILLS

- **Languages:** Rust, C++, C#, Java, PHP, JavaScript/TypeScript, SQL, C.
- **Frameworks & Libraries:** .NET (ASP.NET, MAUI, Blazor, WPF), React.js, Node.js, Actix, Tauri, Entity Framework, Spring Boot.
- **Systems & Graphics:** OpenGL, DirectX, LWJGL, WinForms, Electron, ImGui.
- **Tools & DevOps:** Docker, Git/GitHub/GitLab, CMake, Jenkins, CI/CD, Bash, PowerShell.
- **Databases:** MySQL, PostgreSQL, Redis, SQLite.
- **OS & Platforms:** Linux (ARM, x86, AMD64), Windows, MacOS, AWS, Google Cloud Platform.

PROFESSIONAL EXPERIENCE

Marden's Surplus & Salvage | Winslow, ME

Lead Software Engineer | *November 2023 – Present*

- Spearhead the design and development of robust internal systems, utilizing MySQL for database management and a hybrid stack of PHP, React.js, and Rust for application logic.
- Architect high-performance REST APIs to ensure seamless data integration across diverse enterprise systems.
- Lead technical initiatives to modernize legacy infrastructure, introducing strong typing and memory-safe languages (Rust) to critical backend services.
- Manage full lifecycle software development, from requirement analysis and schema design to deployment and CI/CD integration.

ForwardFlow | Remote

Software Engineer | *February 2025 – August 2025*

- Built TypeScript integrations linking ElevenLabs voice AI with Twilio telephony to power real-time, conversational voice applications.
- Engineered AI-driven call and messaging workflows, orchestrating speech synthesis and automated communication across third-party APIs.

LFInteractive LLC | Winslow, ME

Software Engineer | *October 2020 – November 2023*

- Designed and deployed custom full-stack web solutions and backend systems for a diverse client base.
- Implemented scalable APIs and responsive user interfaces using modern web technologies.
- Managed server environments and database integrations, ensuring high availability and security for client applications.

KEY TECHNICAL PROJECTS

serde_hash — Open-Source Rust Library

Rust · macro-based · 3,000+ crates.io downloads · github.com/Drew-Chase/serde_hash

- Integrates HashIds into Serde (de)serialization to obfuscate numeric IDs in JSON via zero-boilerplate Rust macros.

Universal Auto Update Packager (UAUP) — Cross-Platform CLI Release Tool

Node.js / JavaScript · 15 stars, 13 forks (most-starred repo) · github.com/Drew-Chase/UAUP-JS

- Packages build artifacts into distributable auto-update bundles for cross-platform CI/CD release pipelines.

Quay — SFTP/FTP Editor — Cross-Platform Desktop Application

Rust + Tauri + React / TypeScript · 300+ commits · github.com/Drew-Chase/sftp-editor

- SFTP/FTP browser, code editor, and built-in SSH terminal over a memory-safe Rust backend with a React/TypeScript UI.

Simple Mod Config — Loader-Agnostic Java Framework

Java · Modrinth Maven · Forge / Fabric / Quilt · github.com/Drew-Chase/Simple-Mod-Config

- One common API for client/server mod configs, shipped as multi-loader Gradle builds and reused as a dependency by other mods.

cclip — Low-Level C++ Command-Line Library

C++ · reusable native tooling · github.com/Drew-Chase/cclip

- Argument-parsing library for native C++ applications, showcasing low-level systems programming and clean, reusable API design.

EDUCATION

High School Diploma

Waterville High School, Waterville, ME | 2016
